$$\text{Dividend} \div \text{Divisor} = \text{Quotient}$$

Division means finding what number times the divisor will equal the dividend.

What number times 3 equals 6? *or*
How many times do we have to add 3 to get 6?

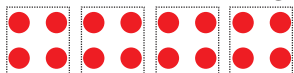

We write $6 : 3 = 2$
six divided by 3 equals 2

That means $2 \times 3 = 6$
2 times 3 equals 6

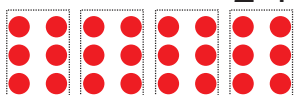

$9 : 3 = \dots\dots\dots$
 That means $\dots\dots 3 \dots \times \dots\dots 3 \dots = \dots\dots 9 \dots\dots$

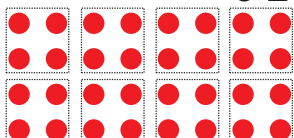

$8 : 2 = \dots\dots\dots$
 That means $\dots\dots\dots \times \dots\dots\dots = \dots\dots\dots$

$20 : 5 = \dots\dots\dots$
 That means $\dots\dots\dots \times \dots\dots\dots = \dots\dots\dots$

$16 : 4 = \dots\dots\dots$
 That means $\dots\dots\dots \times \dots\dots\dots = \dots\dots\dots$

$18 : 2 = \dots\dots\dots$
 That means $\dots\dots\dots \times \dots\dots\dots = \dots\dots\dots$

$24 : 4 = \dots\dots\dots$
 That means $\dots\dots\dots \times \dots\dots\dots = \dots\dots\dots$

$32 : 8 = \dots\dots\dots$
 That means $\dots\dots\dots \times \dots\dots\dots = \dots\dots\dots$

Division

Division means that we divide a number into equal parts.

Divide a number 8

into 4 equal parts.

We write

$$8 : 4 = 2$$
